

PROFESSIONAL CAPABILITIES

- Design / Build Projects
- Alternate Designs
- Temporary Runarounds
- Earth Retention Systems
- Cofferdam Design
- Shoring Design
- Excavation Support Systems
- Erection Procedures
- Falsework and Forms
- Lifting and Jacking Solutions
- Moveable Bridge Balancing
- Roll-In Design
- Repair Methods and Design
- Troubleshooting
- Investigation of Field Problems
- Shop Drawing Review
- Claims Support
- NPDES Permitting
- Erosion Control Plans
- Environmental Permit Submissions
- Groundwater Control Methods
- Underwater Construction Inspection and Documentation
- Permit Applications

Collins can assist with the design services needed to keep jobs running on schedule and within budget. We provide innovative, professional engineering services tailored to meet your needs. Collins' team has years of experience with the construction industry, government, railroads, transit systems, commercial clients, and private owners.

Collins understands the need for practical solutions, often developed to meet very tight schedules and budgets, and will work with your organization to accommodate specific project requirements. As members of numerous national technical committees, Collins' personnel are aware of the applicability and limitation of various codes, and create custom solutions to unique construction problems.

Collins maintains an engineering staff experienced in the field, supported by technological systems for analysis, design, and drafting. Collins places extreme importance on timeliness and cost-effectiveness in all phases of a project.
