Collins' staff of registered Professional Engineers and Structural Engineers has developed experience worldwide in waterfront inspection, construction support, analysis, design, and rehabilitation at both private facilities and United States Navy installations. Collins routinely delivers a cost-effective match of structural engineering, site development, and underwater/coastal inspection expertise for diverse projects ranging from project planning, site investigation, and design to construction inspection. These diverse qualifications, combined with an attitude of awareness to special client needs, allow Collins the flexibility to tackle small and unusual assignments and site work, as well as major structural design projects.
